AMTEK INVESTS FOR SUCCESS

January 8th, 2008., In spite of a rocky year Amtek Precision has continued to expand with four new appointments across machinery operation, administration and sales and marketing in addition to its investment in four major pieces of technology.

To cope with increased customer demand, Amtek has been joined by CNC Machinists Dean Upton and William Neil. Amtek has also appointed Jo Zilhka responsible for shop floor administration and Anna Rawles as Sales & Marketing Manager. With over eight years experience in PR and marketing Anna has come on board to work alongside MD, Mike Jones to manage the sales and marketing function of the company, helping secure and manage its growth over the coming years.

With regard to technology, Amtek has invested in the 5 AXIS MAZAK INTEGREGX 200-IV, in addition to the HURCO VM1 complete with 20 station swing arm automatic tool changer, the Full CNC CMM Global Classis 555 DEA and the ANDMAR APS - 818S. These investments add to an overall investment of over £600K in new plant and machinery within the last 12 months.

Reflecting on these investments and key staff appointments, Mike Jones, Founder and MD Amtek Precision Engineers commented, "Our commitment to continuing to refine and improve upon our core business - the design and manufacture of the highest quality plastic injection moulds - means we have continued to secure business from past customers whilst attracting new customers looking for the specialist tooling we provide. We are growing steadily and feeling very positive about the future and hope to secure larger premises in the near future to cope with the continued growth of the company."
